what differential calculus and in general analysis ofthe infinite might be can hardly be explainedto those innocent ofany knowledge ofit nor can we here offer a definition at the beginning of this dissertation as is sometimes done in other disciplines it is not that there is no clear definition of this calculus rather the fact is that in order to understand the definition there are concepts that must first be understood besides those ideas in common usage there are also others from finite analysis

that are much less common and are usually explained in the course of the development of the differential calculus for this reason it is not possible to understand a definition before its principles are sufficiently clearly seen in the first place this calculus is concerned with variable quantities although every quantity can naturally be increased or decreased without limit still since calculus is directed to a certain purpose we think of some quantities as being constantly the same magnitude while others change through all the stages of increasing and decreasing we note this distinction and call the former constant quantities and the latter variables this characteristic difference is not required by the nature of things but rather because of the special question addressed by the calculus
